Admin Onboarding

Current Status

Verified on March 16, 2026 against the live Supabase-backed portal.

Smoke-tested admin workflows:

- login and dashboard load
- settings access
- billing access
- admin saved-view create and delete
- engineer-only tools remained absent from the admin experience

What Admin Is For

Admin runs the school-day operations layer.

Admin owns:

- cohorts and schedules
- task assignment
- family follow-up
- billing follow-up workflow
- saved views
- announcements
- operational oversight across staff, TA, and instructor work

Admin does not own:

- engineer break-glass
- feature flags
- change freeze
- integration maintenance mode
- engineer incident controls

Core Boundaries

Admin can:

- access every normal portal section
- manage `staff`, `ta`, and `instructor` accounts
- work with billing and exports
- manage operational tasks and announcements
- use approvals, escalations, saved views, archive and restore actions, and capacity forecasting
- work contact history and internal billing follow-up

Admin cannot:

- manage `admin` or `engineer` accounts
- use engineer support tooling
- view or operate the schema inspector
- run system remediation actions

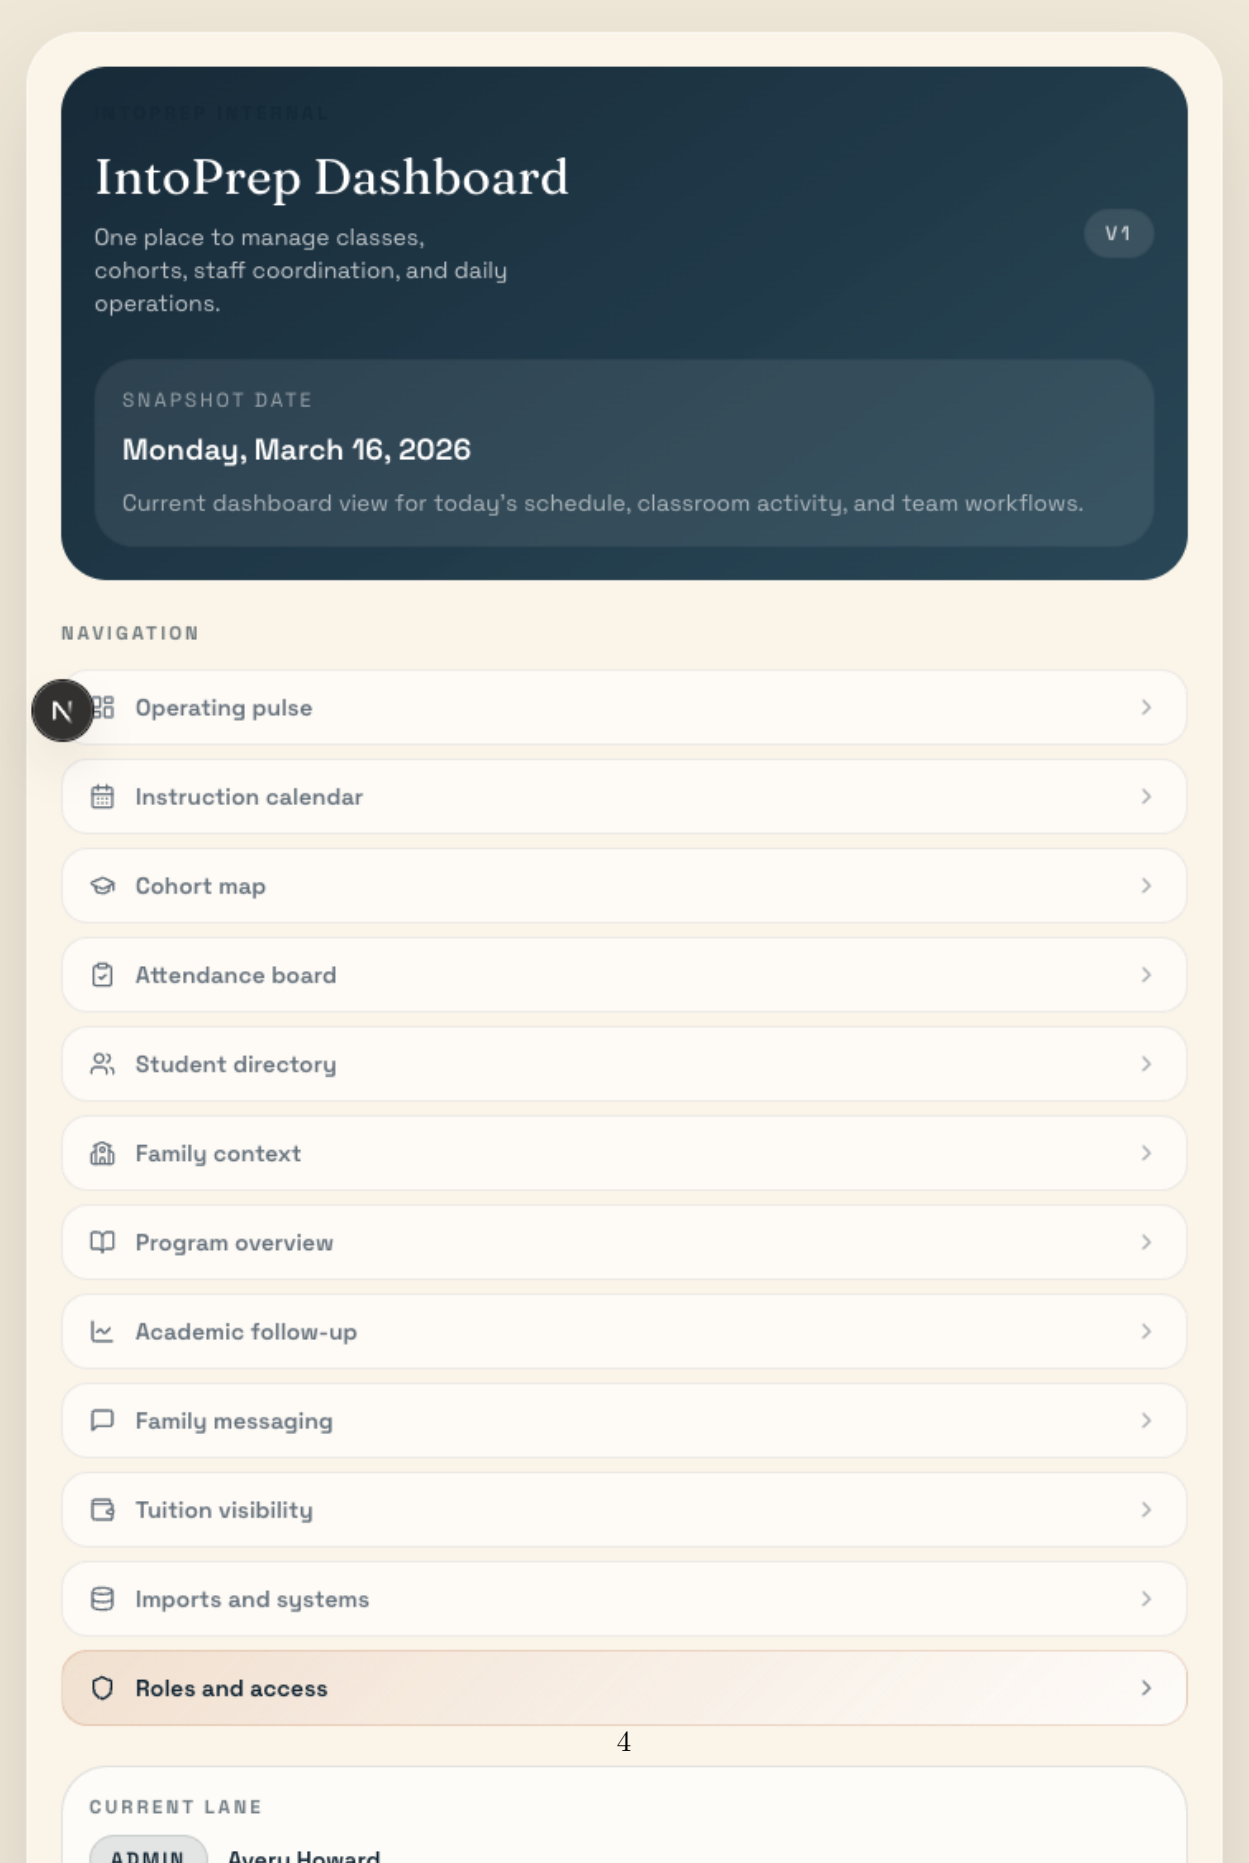
Admin Settings



First Login Walkthrough

1. Sign in at `/login`.
2. Start on "Operating pulse".
3. Review:
   - follow-up queue
   - pending staff escalations
   - staff and TA announcements
   - onboarding watch
   - capacity forecasting
4. Open "Tuition visibility" and confirm the billing queue is visible.
5. Open "Roles and access" and confirm only staff, TA, and instructor management surfaces are available.

Daily Workflow

1. Start With Operations Pulse

Review:

- cohort capacity
- outstanding classroom issues
- billing follow-up workload
- pending escalations and approvals
- onboarding gaps for staff, TA, and instructor

2. Work The Follow-Up Queue

Use the tasking panel to:

- create operational tasks
- assign ownership
- set due dates
- track status

Typical admin task types:

- billing follow-up
- family communication
- attendance follow-up
- missing scores

- cohort staffing

3. Review Billing Daily

Open “Tuition visibility”.

Use billing to:

- review overdue or pending invoices
- update internal follow-up state
- add notes for follow-up context
- keep finance work coordinated without changing source-of-truth invoice state

4. Manage People Safely

Open “Roles and access”.

Use this area to:

- provision staff, TA, and instructor accounts
- suspend or reactivate those accounts
- manage cohort assignments for TA and instructor
- review operational audit trails

5. Coordinate The Team

Use admin announcements for operational notices.

Good examples:

- attendance follow-up priority
- rooming changes
- score-entry deadlines
- upcoming billing handoffs

Complete Capability Map

Admin is the business-operations owner inside the portal.

Use admin for:

- operational dashboard review
- user management for staff, TA, and instructor
- cohort and program operations
- bulk cohort actions
- archive and restore for cohorts and programs

- approvals and escalations
- billing exports and billing follow-up
- saved views
- parent contact history
- staff-facing internal announcements
- onboarding watch and capacity forecasting

Do not use admin for:

- engineer break-glass
- feature flags
- change freeze
- schema inspection
- integration remediation and platform-repair tooling

How To Save And Reopen A Queue

1. Open the section you care about, such as billing or academics.
2. Apply the filters you use repeatedly.
3. Save the filtered view.
4. Reopen it later from the saved-views list on the dashboard.

Verified in smoke testing:

- admin saved-view create worked
- admin saved-view delete worked

How To Use Billing Follow-Up

1. Open "Tuition visibility".
2. Find the invoice or family needing action.
3. Review current status, due date, and last follow-up state.
4. Add the new follow-up note.
5. Update the follow-up state:
    - `open`
    - `in_progress`
    - `resolved`
6. If issue needs someone else, assign a task from the admin dashboard.

How To Work Escalations And Approvals

1. Review escalations and approval requests from the dashboard or the related ops panels.
2. Open the request or escalation and read the handoff context before acting.
3. Decide whether the item should be:
   - acknowledged
   - approved
   - rejected
   - closed after action
4. Complete the operational action in the correct workflow surface.
5. Leave the system in a clean status so staff and TA know what happened.

How To Manage Cohorts And Programs

1. Open “Cohort map” or “Program overview”.
2. Review capacity, enrollment, rooming, and staffing context.
3. Use conflict warnings before finalizing schedule or cohort changes.
4. Use archive or restore for lifecycle changes instead of deleting records outright.
5. Use bulk operations only when you are confident the cohort impact is correct.

How To Use Contact History

1. Open the family or billing workflow surface.
2. Review the existing outreach timeline first.
3. Add the new contact event with the source and outcome.
4. Keep notes short and operational so the next person can continue the thread cleanly.

How To Use Announcements

1. Draft the message as an internal operations notice.
2. Target only the roles that need it.
3. Set the active window if timing matters.
4. Remove or expire the message when it is no longer operationally relevant.

How To Read Capacity Forecasting

- near-full cohorts: rebalance early before room or staffing pressure becomes a problem.
- underfilled cohorts: review whether intake, placement, or schedule changes are needed.
- onboarding watch: use it with the forecast to spot where new staff, TA, or instructor coverage may be missing.

How To Review Role Access

1. Open "Roles and access".
2. Search for the user.
3. Confirm the role and status are correct.
4. Update only staff, TA, or instructor accounts from here.
5. Use password reset or assignment actions when onboarding a user.

Guardrails

- admin cannot manage admin or engineer accounts
- admin cannot use engineer-only support or incident tools
- exports and billing changes are audited
- destructive operational lifecycle changes should prefer archive or close flows instead of hard deletion

Verified Behavior

Verified in the live browser pass:

- admin login succeeded
- admin dashboard loaded correctly
- "Tuition visibility" was accessible
- "Roles and access" was accessible
- admin saved-view create/delete succeeded through the real API

Recommended First-Day Checklist

- review the dashboard panels from top to bottom
- open billing and confirm you understand follow-up states
- create and remove a test saved view using your real operating filters
- review current pending escalations

- inspect a user in “Roles and access”
- post a short internal announcement only after you understand targeting rules
