Staff Onboarding

Current Status

Verified on March 16, 2026 against the live Supabase-backed portal.

Smoke-tested staff workflows:

- login and dashboard load
- assigned task update
- billing access
- messaging access
- direct access to `/settings` correctly redirected back to `/dashboard`

What Staff Is For

Staff is the global operations role.

Staff owns:

- assigned work queues
- family follow-up
- session updates
- single-student placement changes
- day-to-day billing follow-up when assigned
- messaging and family contact context

Staff does not own:

- user governance
- engineer tooling
- admin-only announcements
- billing exports
- archive or restore controls

Core Boundaries

Staff can:

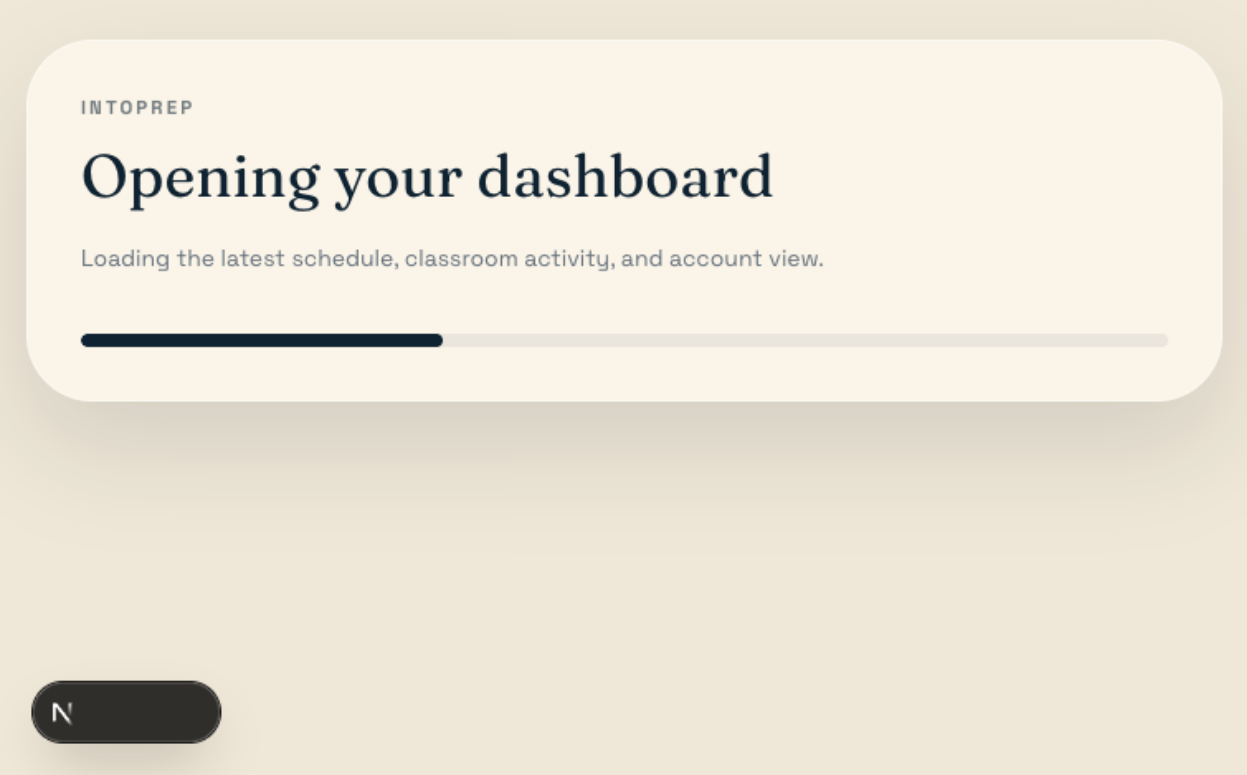
- access `dashboard`, `calendar`, `cohorts`, `attendance`, `students`, `families`, `programs`, `academics`, `messaging`, `billing`, and `integrations`
- update tasks assigned to them
- claim and work leads
- edit sessions and move a single student between cohorts
- work assigned billing follow-up
- reply to families and start one-off threads
- work with day-to-day academic and cohort operations
- save personal views, create personal templates, submit approvals, and escalate blocked work

Staff cannot:

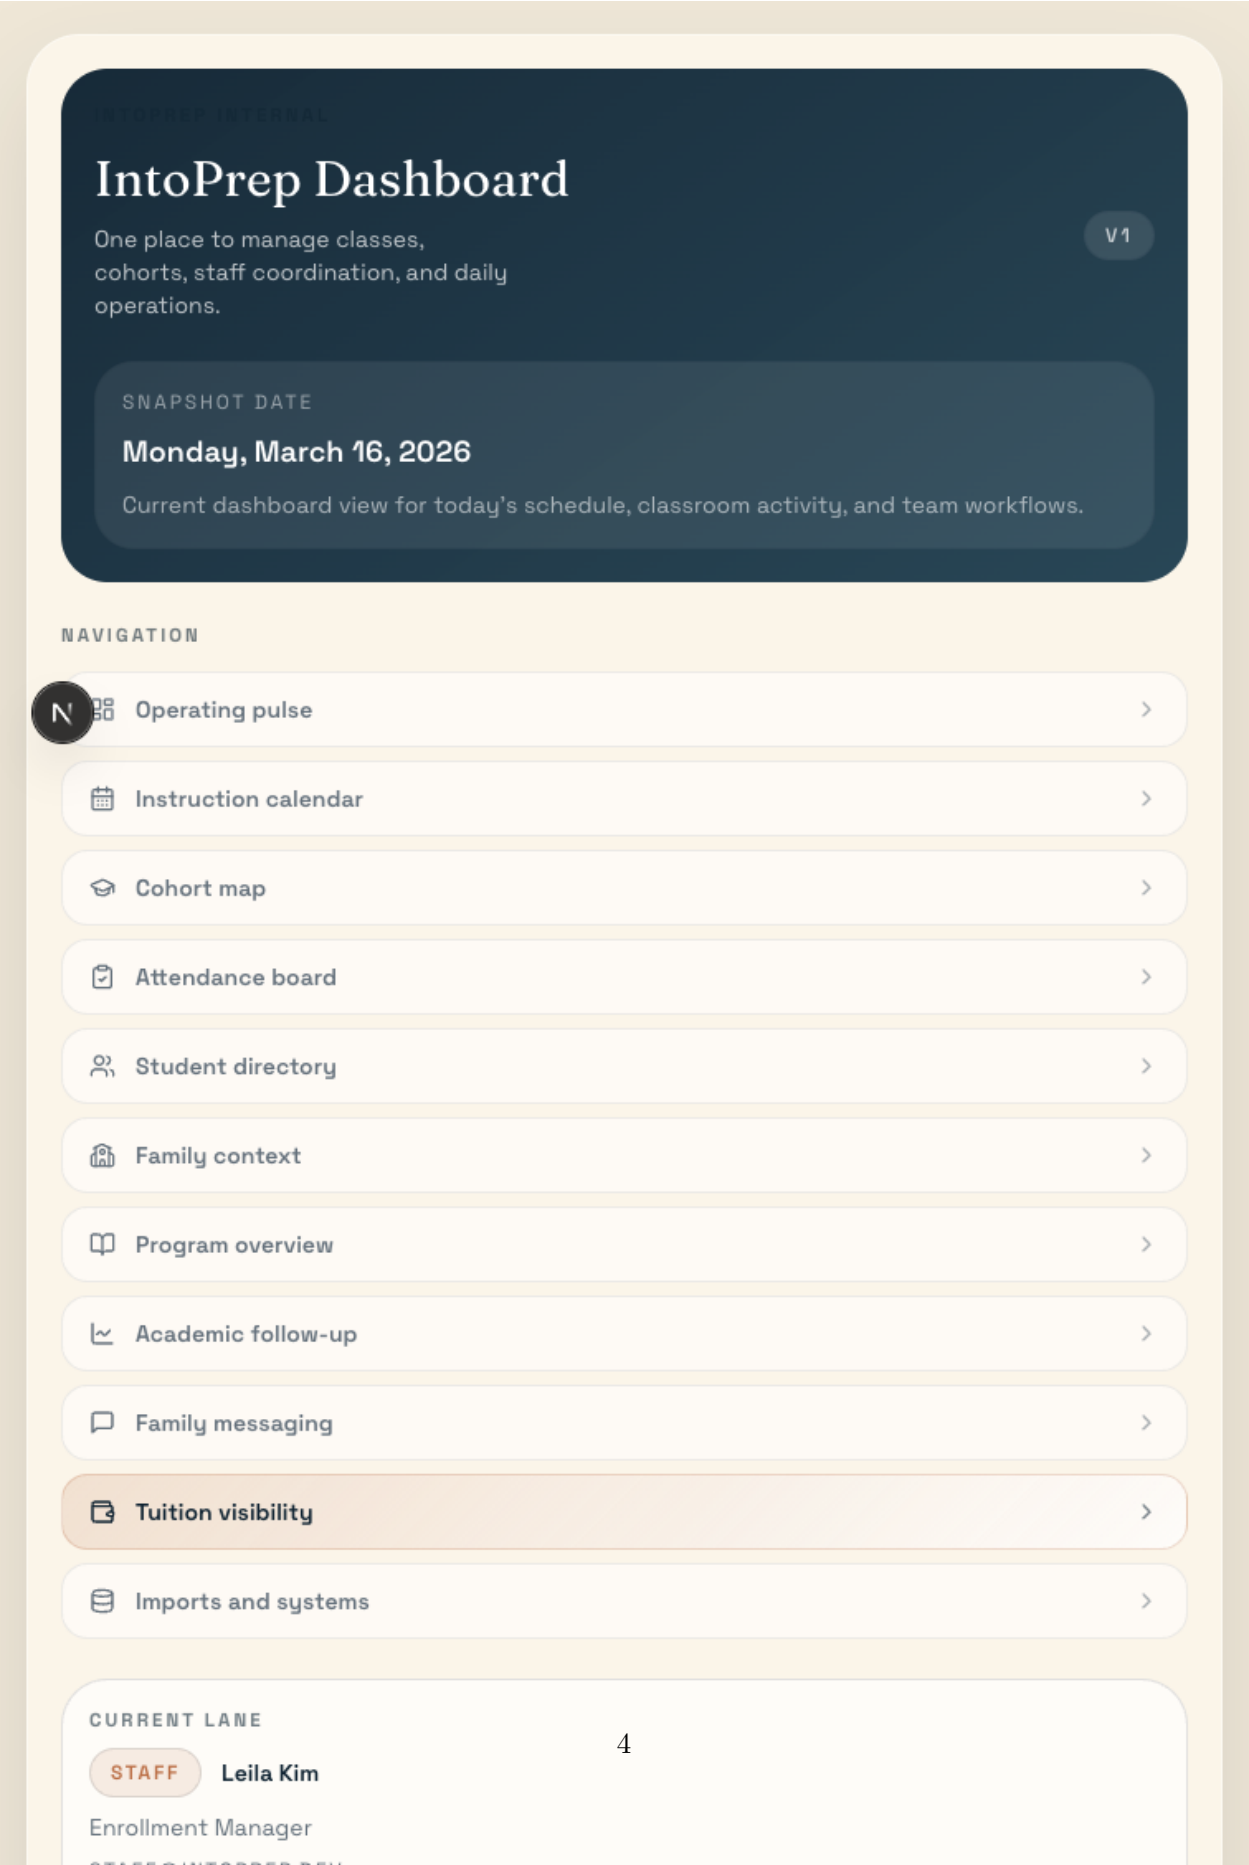
- open `settings`
- manage users
- use break-glass
- export billing
- change staffing coverage or cohort capacity
- use engineer or admin-only system controls

Screens

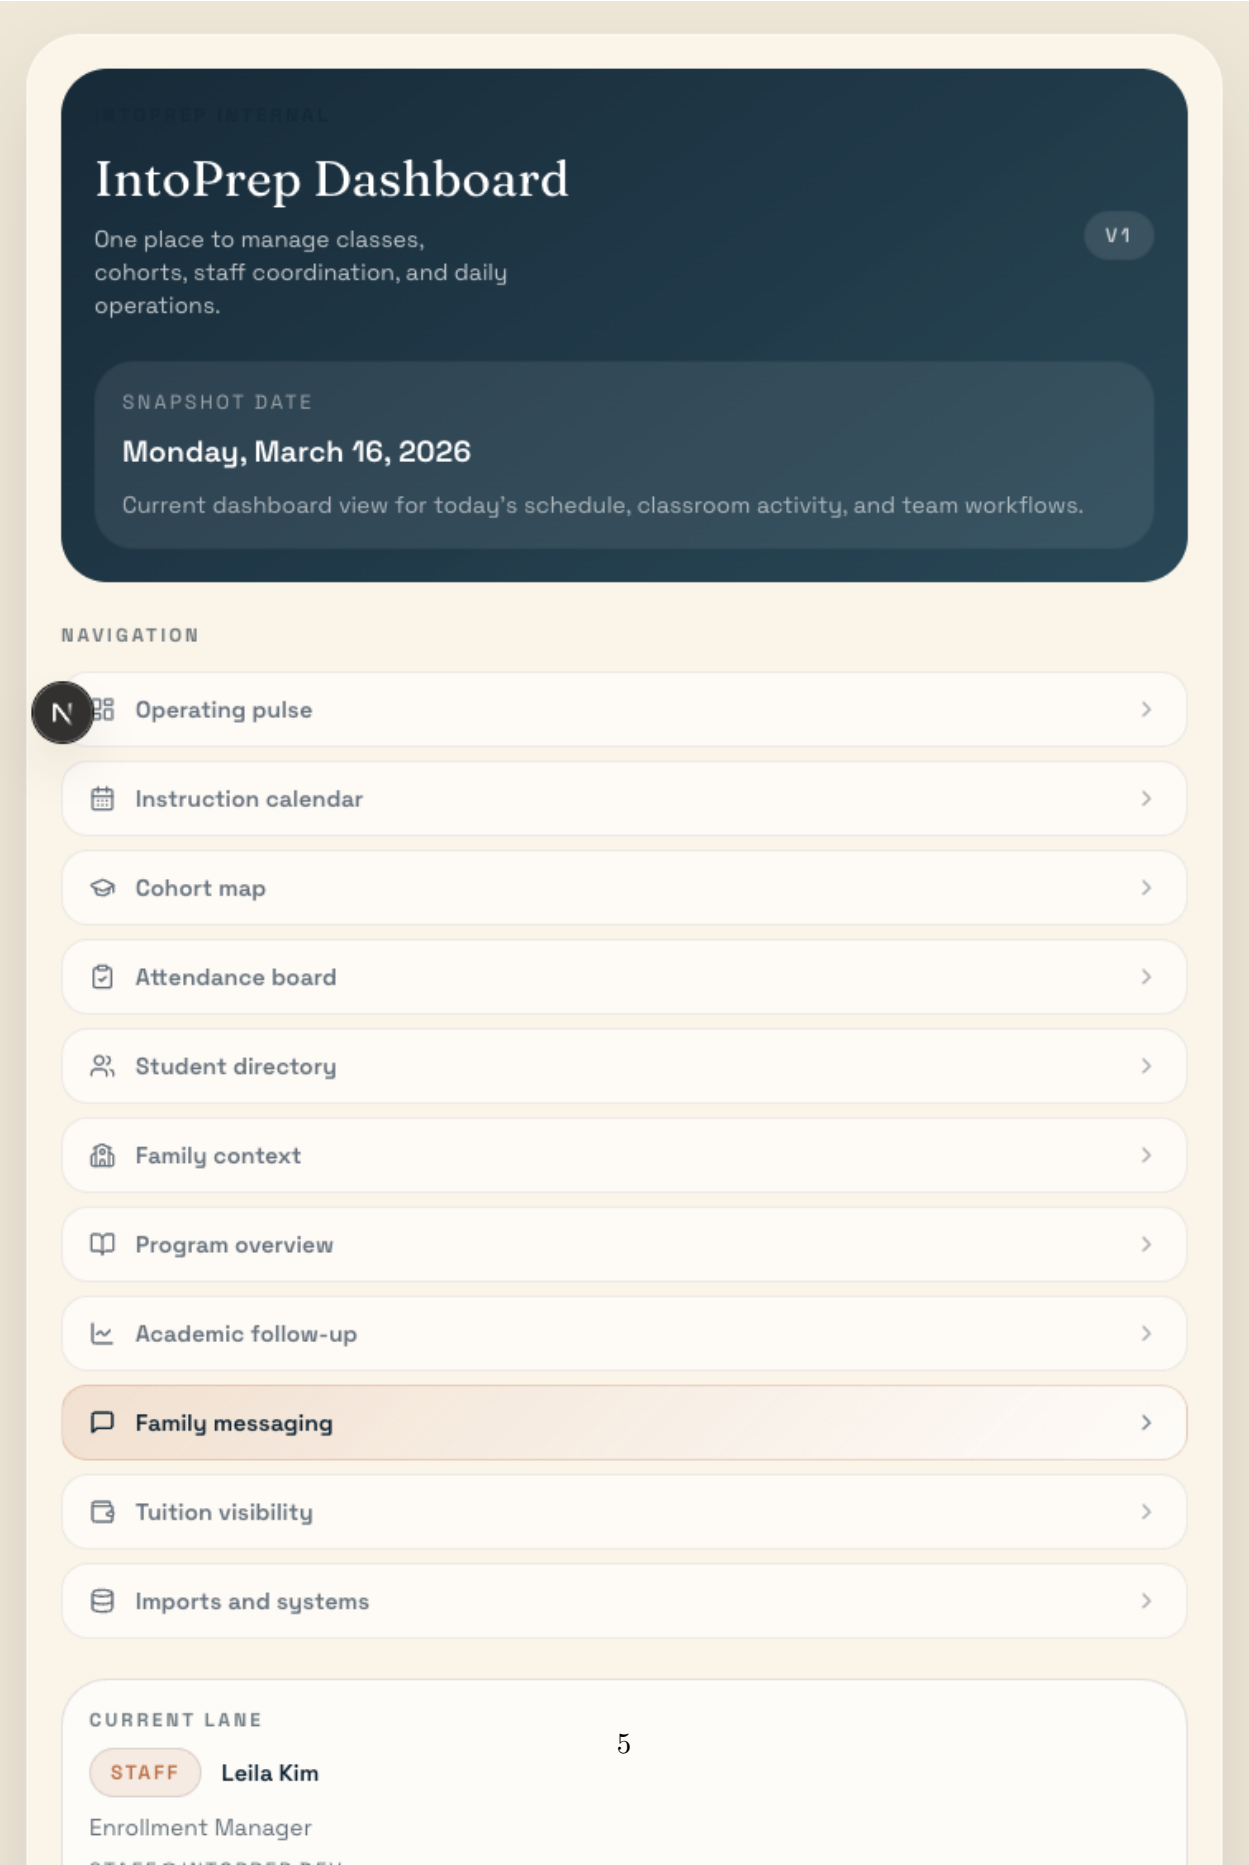
Staff Dashboard



Staff Billing



Staff Messaging



First Login Walkthrough

1. Sign in at `/login`.
2. Start on "Operating pulse".
3. Review:
    - assigned tasks
    - overdue work
    - claimed leads
    - unanswered family communication
    - assigned billing follow-up
4. Open "Tuition visibility" and confirm the billing lane is visible.
5. Open "Family messaging" and review the current threads before replying.

Daily Workflow

1. Work Your Dashboard First

Use the dashboard to decide what needs motion today.

- overdue tasks
- overdue billing follow-up assigned to you
- blocked lead follow-up
- unanswered family threads
- sessions needing prep or closeout

2. Update Assigned Tasks

When a task is assigned to you:

1. Open the relevant work item
2. Move the status as work progresses
3. Leave a short progress, blocker, or handoff note

Smoke test verification:

- staff task update worked on the assigned billing follow-up task

3. Work Billing Only When It Is Yours

Open "Tuition visibility" only for the items assigned to you.

- review invoice context
- log follow-up progress

- keep the next handoff clear

Do not treat billing as a free-for-all queue. If it is not assigned to you, it should stay read-only.

4. Keep Family Communication Moving

Open "Family messaging" to:

- reply inside existing threads
- start new one-off threads when needed
- keep the message history current for the rest of the team

5. Use Integrations As A Watch Surface

You can review sync health and run routine imports, but you should not expect to change source configuration or remediation state from the staff role.

Complete Capability Map

Staff is the global execution role for day-to-day operations.

Use staff for:

- assigned tasks and overdue queues
- lead ownership and follow-up
- session edits
- session prep and closeout tracking
- single-student cohort moves
- assigned billing follow-up
- family contact history and one-off messaging
- personal outreach templates
- approval requests and escalations
- personal saved views
- routine import monitoring and manual imports

Do not use staff for:

- user governance
- billing exports
- cohort staffing changes
- archive and restore
- source configuration edits

How To Update A Task

1. Find the assigned task from the dashboard.
2. Open the related workflow surface.
3. Change the status:
   - `open`
   - `in_progress`
   - `done`
4. Add the note type that best matches the update:
   - progress
   - blocker
   - handoff
5. Save the update so admins and TAs can see the latest context.

How To Work A Billing Follow-Up

1. Open "Tuition visibility".
2. Confirm the invoice or family is assigned to you.
3. Review the last follow-up state and notes.
4. Add the new action note.
5. Move the follow-up state if needed.
6. If blocked, escalate through the normal admin path instead of trying to bypass workflow.

How To Claim And Work A Lead

1. Open the lead from the dashboard or intake-facing workflow.
2. Claim the lead if it is unowned.
3. Update stage, follow-up date, and notes as you work it.
4. Release it only if ownership needs to move away from you.
5. If another person should own it, ask admin to reassign it.

How To Edit A Session Or Move One Student

1. Open the cohort or session view.
2. Update only day-to-day session details such as title, time, room, or mode.
3. For a student move, select one student and move only that enrollment.

4. Read conflict warnings before saving.
5. If the change affects staffing, cohort capacity, or multiple students, stop and use an approval request instead.

How To Use Session Prep And Closeout

1. Open the relevant session workflow.
2. Review the prep and closeout checklist state before the class begins and after it ends.
3. Update the items that are complete so the rest of the team can see session readiness.
4. Use notes or task updates if the checklist shows work is blocked.

How To Use Family Contact History And Messaging

1. Open the family or thread.
2. Read the existing history before adding a new note or message.
3. Add the contact event with source and outcome when you complete a follow-up.
4. Use a personal outreach template if it helps you stay consistent.
5. Keep the message operational and specific to the current family need.

How To Use Personal Templates

1. Create a template for common cases such as schedule change, missed attendance, score follow-up, or general outreach.
2. Save it under your own account.
3. Reuse it when starting a new one-off thread or replying inside a matching workflow.
4. Update the wording as you learn what works, but keep it personal and not team-wide.

How To Submit An Escalation Or Approval Request

1. Use escalation when work is blocked and admin attention is needed now.
2. Use an approval request when you need permission for something outside your role, such as a bulk move or source change.
3. Enter a clear reason and handoff context.
4. Track the resulting status in your queue rather than assuming someone saw it elsewhere.

How To Use Saved Views

1. Open the section you work repeatedly.

2. Apply the filters you want to reuse.
3. Save the view under a clear personal name.
4. Reopen it from your saved-view list the next time you need the same queue.

How To Use Integrations

- review sync health and recent import runs
- run a routine manual import when that is part of your workflow
- stop if the task requires source editing, remediation, or maintenance mode and hand it to admin or engineer

Guardrails

- no `settings` access
- no billing export
- no engineer incident tooling
- no archive or restore controls
- no reassignment of work owned by someone else

Verified Behavior

Verified in the live browser pass:

- staff login succeeded
- dashboard, billing, and messaging loaded
- staff task update succeeded through the real API
- direct access to `/settings` redirected back to `/dashboard`

Recommended First-Day Checklist

- review the dashboard queue
- open billing and confirm assignment-based follow-up
- reply to a demo family thread only after reading the prior context
- update an assigned task so you understand the note types
- review the integrations page as a read-mostly health surface
