TA Onboarding

Current Status

Verified on March 16, 2026 against the live Supabase-backed portal.

Smoke-tested TA workflows:

- login and assigned-cohort dashboard load
- session checklist update
- handoff note creation
- messaging access
- direct access to `/billing` correctly redirected back to `/dashboard`

What TA Is For

TA is the assigned-cohort support role.

TA owns:

- classroom support for assigned cohorts
- attendance support context
- session checklist updates
- handoff notes for instructors
- limited family messaging inside assigned cohorts

TA does not own:

- billing
- settings
- integrations
- global cohort management
- saved views or personal templates

Core Boundaries

TA can:

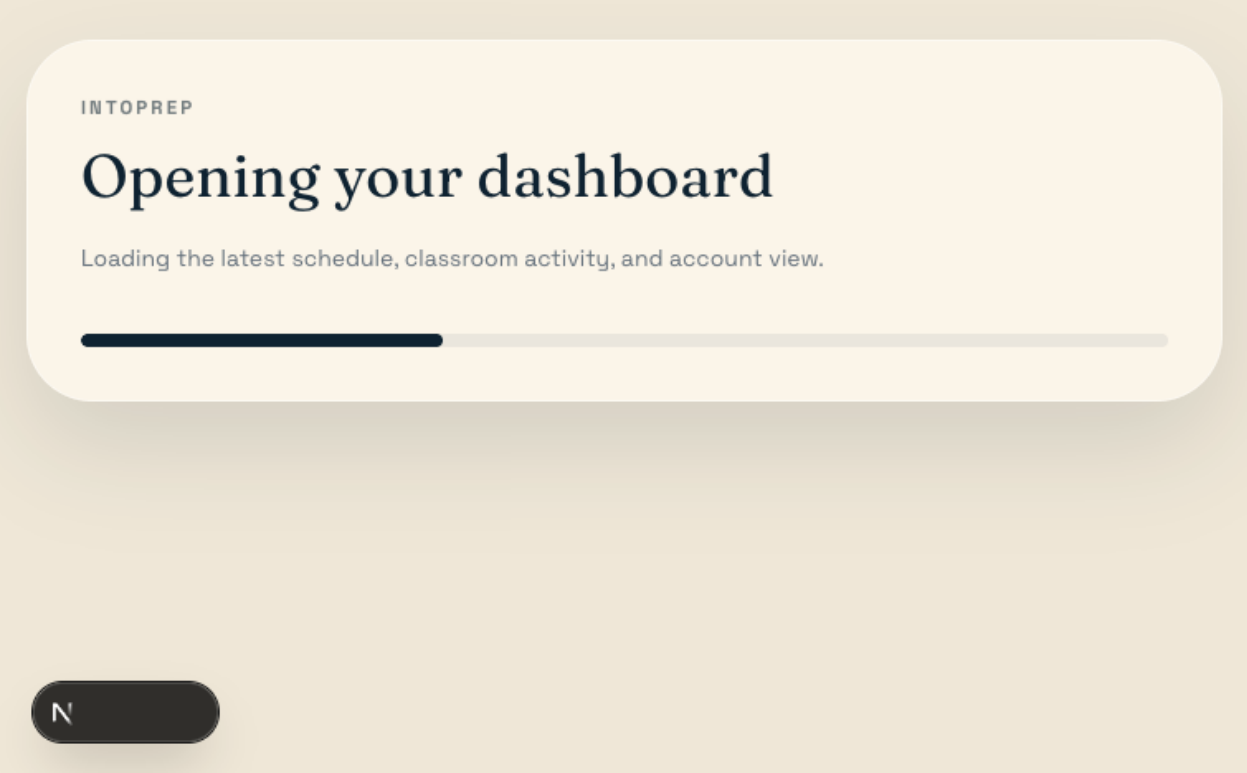
- access `dashboard`, `calendar`, `cohorts`, `attendance`, `students`, `families`, `academics`, and `messaging`
- work only inside assigned cohorts
- see contact basics for those families
- create classroom-support notes and flags
- update assigned tasks, academic notes, resources, and same-day score context inside assigned cohorts
- use category-guarded family threads for assigned cohorts

TA cannot:

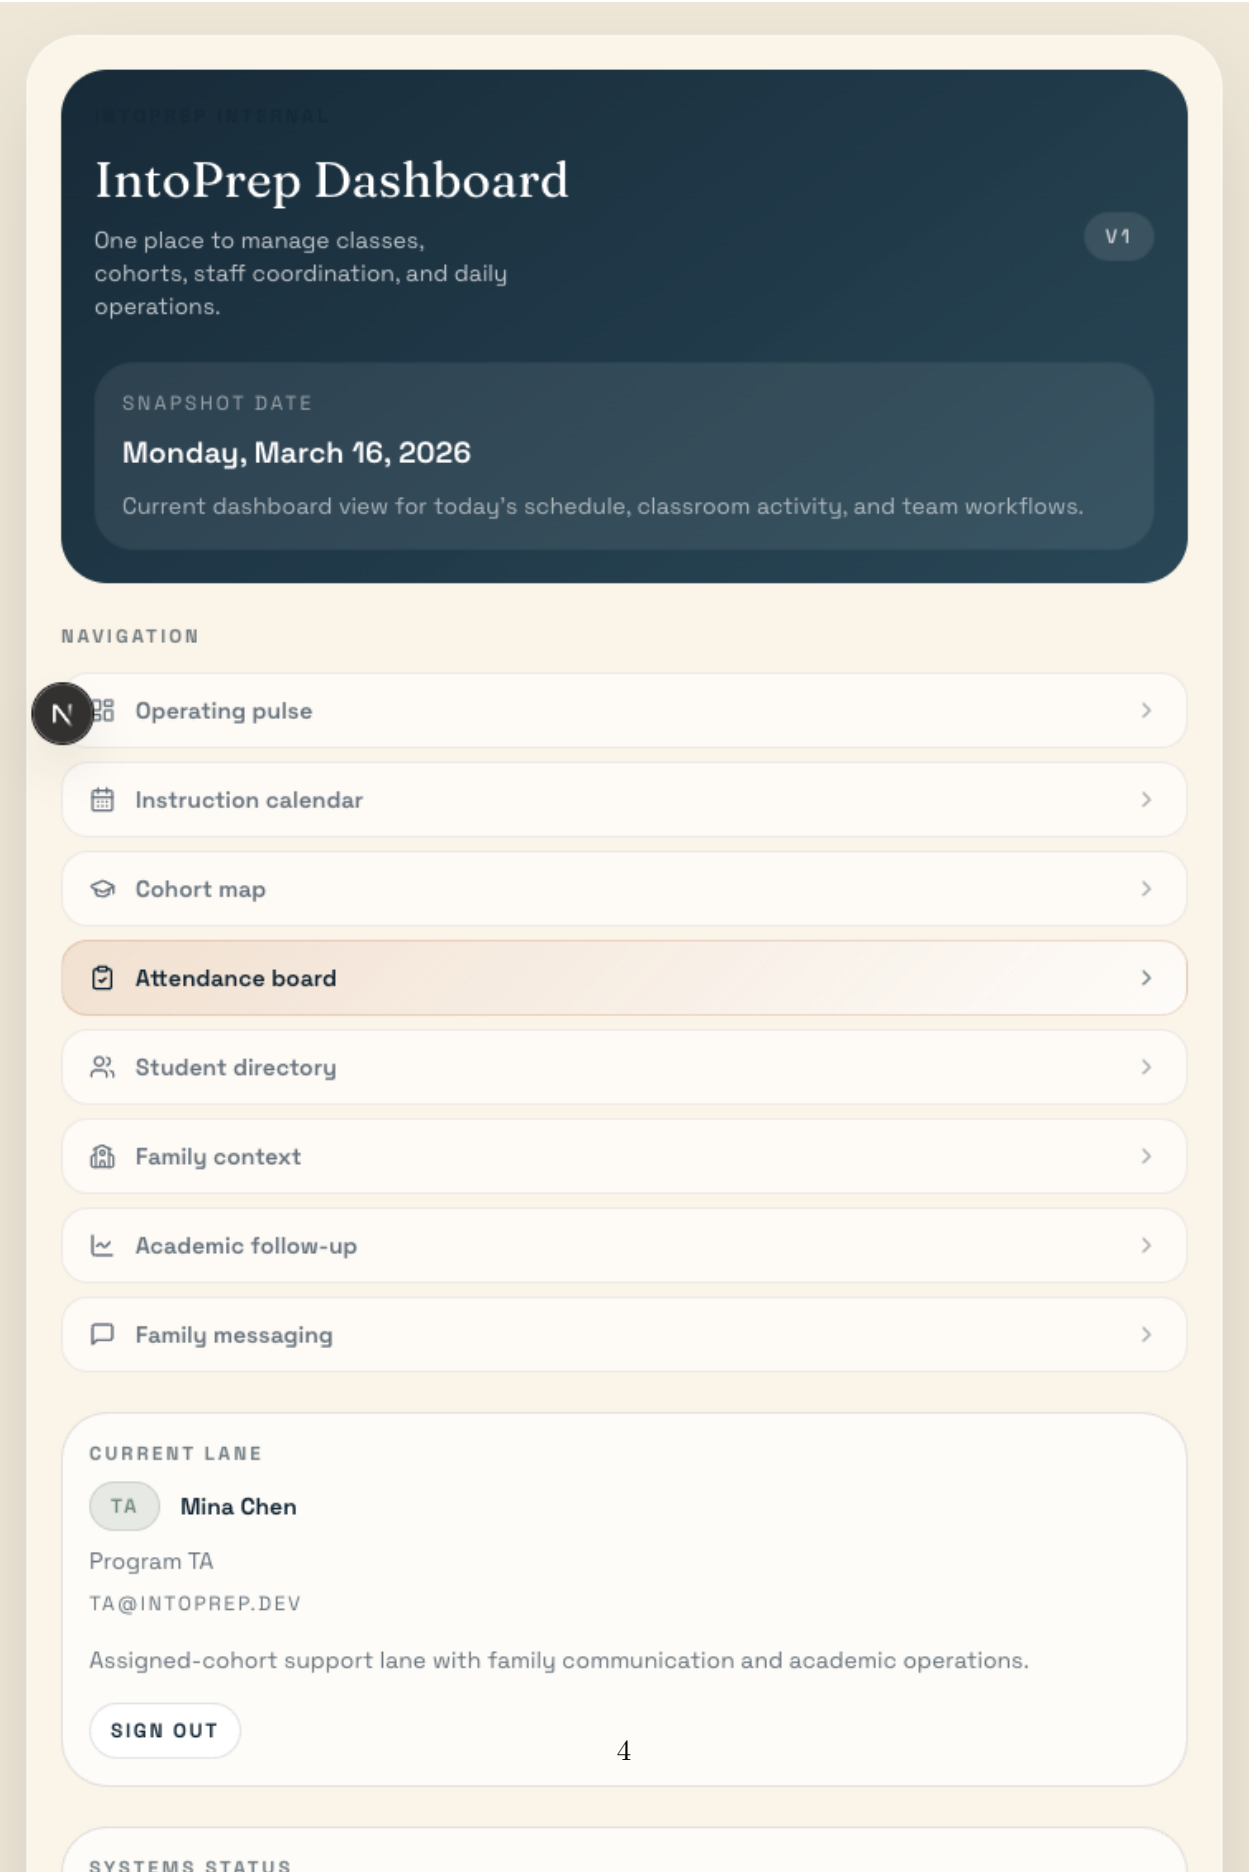
- open `billing`, `integrations`, `programs`, or `settings`
- perform bulk operations
- change staffing or cohort structure
- export data
- use engineer or admin-only tooling

Screens

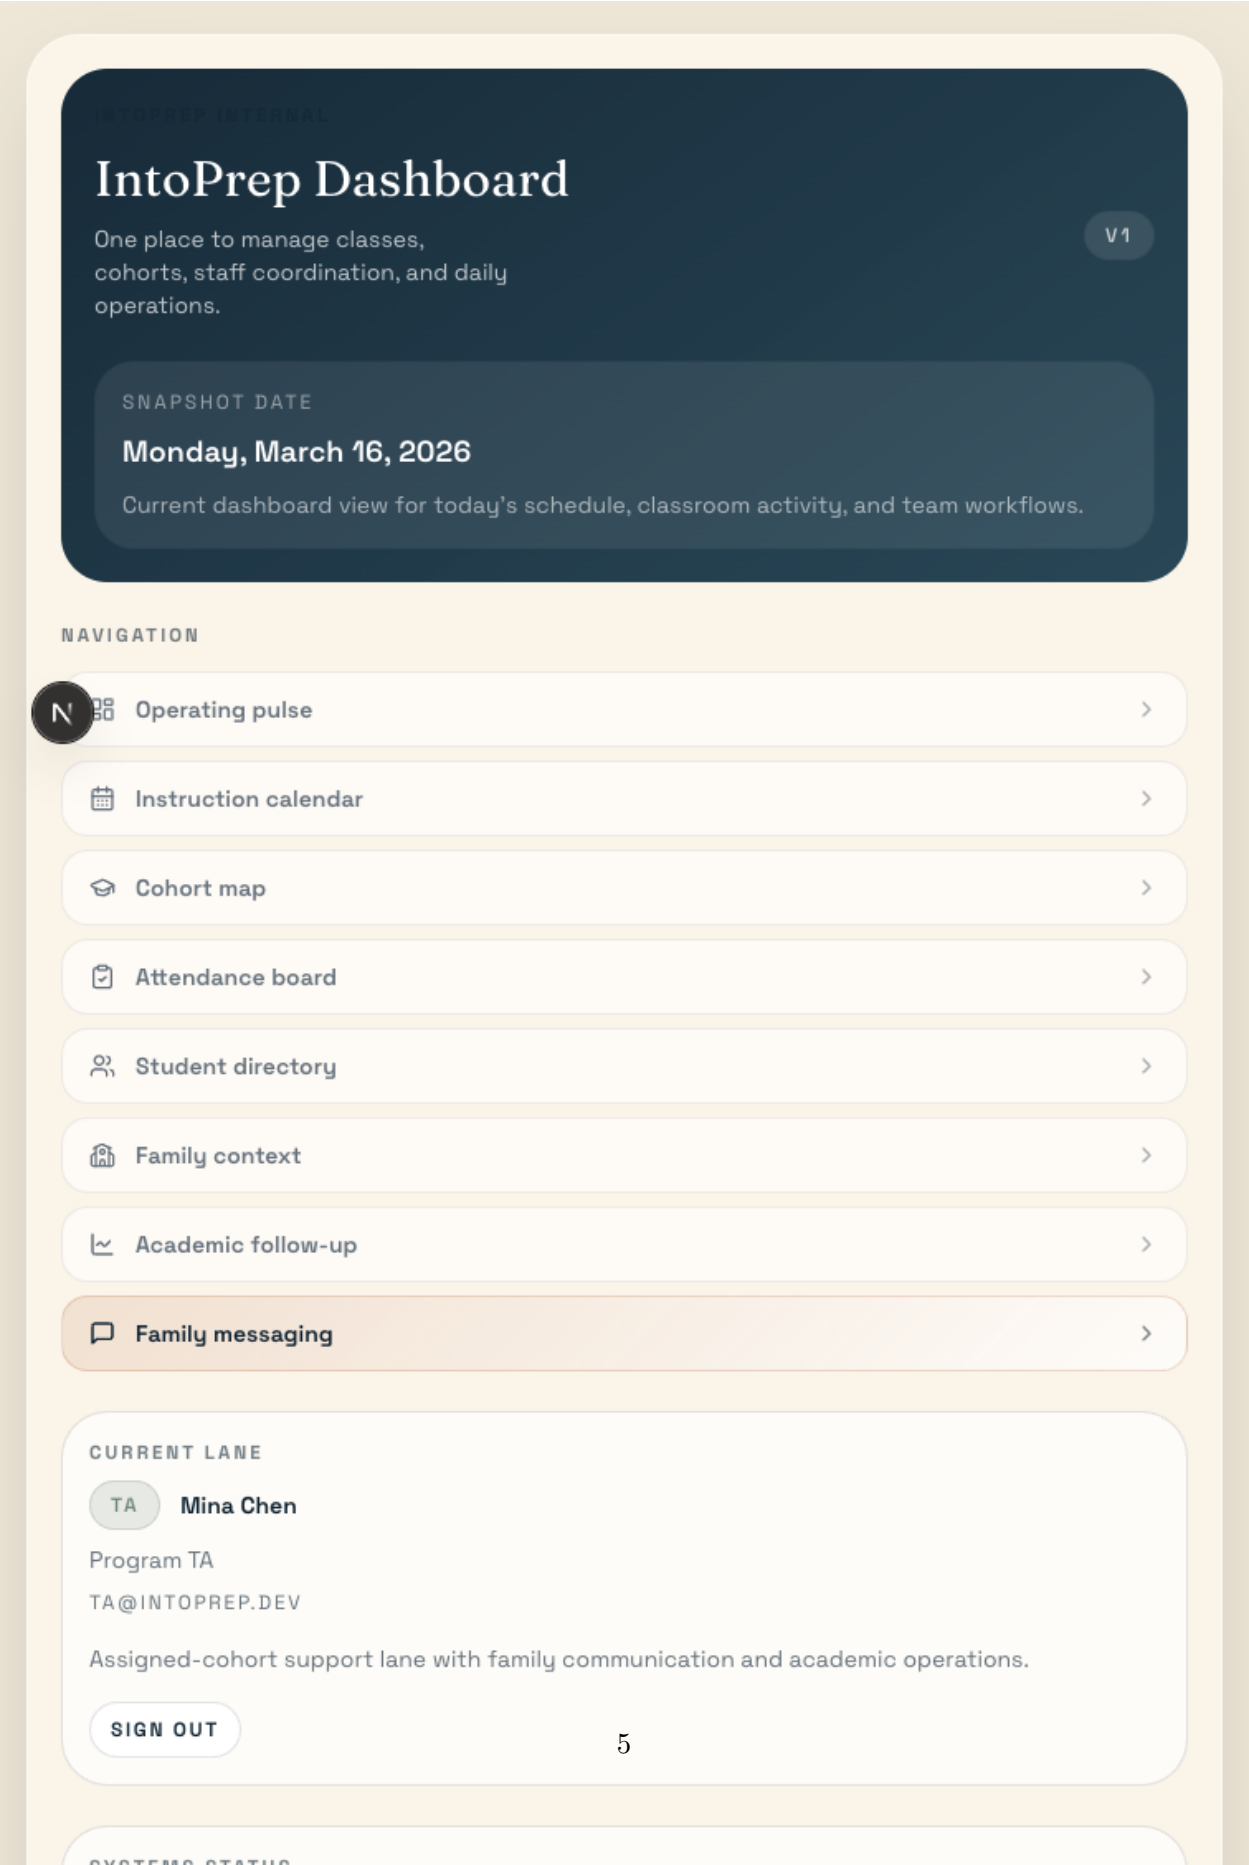
TA Dashboard



TA Attendance



TA Messaging



First Login Walkthrough

1. Sign in at `/login`.
2. Start on "Operating pulse".
3. Review:
   - assigned tasks
   - today's sessions
   - unread family threads
   - blocker or handoff items
4. Open "Attendance board".
5. Open "Family messaging" only for assigned families and read the current thread context before sending anything.

Daily Workflow

1. Start With The Dashboard

Use the dashboard to decide:

- which session needs attention first
- which task is blocked
- which family thread needs an answer

2. Prepare And Close Out Sessions

Open "Attendance board" for each assigned session.

- check rosters
- update shared checklist items
- log handoff notes for the instructor
- keep attendance-related follow-up visible

Smoke test verification:

- TA checklist update succeeded
- TA handoff note creation succeeded

3. Support Family Communication Carefully

Open "Family messaging" to:

- reply to existing cohort-scoped threads
- start a one-off thread only when it belongs to an allowed category such as attendance, scheduling, or academic follow-up

4. Stay Inside Your Cohorts

You should only see the cohorts assigned to you. If a cohort or family is missing, it is usually an assignment problem, not a page bug.

Complete Capability Map

TA is the classroom-support role for assigned cohorts only.

Use TA for:

- assigned tasks
- attendance support
- shared session checklists
- instructor handoff notes
- attendance exception flags
- coverage and availability markers
- academic notes, resources, and same-day score support in assigned cohorts
- read-only student trend review
- family threads for allowed support categories

Do not use TA for:

- billing
- global operations
- staffing or capacity changes
- settings or integrations
- bulk messaging
- family contact-history logging outside the thread workflow

How To Update A Session Checklist

1. Open the session from "Attendance board".
2. Review the prep and closeout items.
3. Update the checklist state for items that are complete.
4. Save the checklist so staff and admin see the updated classroom state.

Typical checklist items include:

- room confirmed
- roster reviewed

- materials ready
- attendance complete
- follow-up sent if needed

How To Leave A Handoff Note

1. Open the assigned session.
2. Add the handoff note after class or when context changes.
3. Keep it short and operational.
4. Focus on what the instructor needs next, not general narrative.

Good handoff notes mention:

- pacing issues
- attendance oddities
- student support needs
- what was already handled

How To Use Attendance Exception Flags

1. Open the assigned session in "Attendance board".
2. Choose the student row that needs attention.
3. Add the right flag type, such as repeated lateness or missing guardian reply.
4. Add a short operational note that helps staff or admin continue the follow-up.

How To Use Coverage Markers

1. Open the assigned session.
2. Add a coverage or availability marker only when the class team needs to know about a support-gap risk.
3. Keep the note brief and operational.
4. Do not treat this as a staffing-change tool. It is a visibility tool.

How To Work Academics As A TA

1. Open "Academic follow-up" for your assigned cohort.
2. Add or update same-day academic notes as needed.
3. Publish resources only within your assigned cohort workflows.
4. Review trends read-only to understand where students may need support.

How To Start A TA Family Thread

1. Open “Family messaging”.
2. Confirm the family is inside one of your assigned cohorts.
3. Choose the allowed thread category:
   - attendance
   - scheduling
   - academic follow-up
4. Write the message clearly and keep it inside the classroom-support lane.

How To Work TA Tasks

1. Start from the dashboard task queue.
2. Update only tasks assigned to you.
3. Use progress, handoff, or blocker notes to keep staff and admin informed.
4. If the work needs authority beyond TA scope, stop and hand it off rather than improvising outside role boundaries.

Messaging Rules

- stay within assigned cohorts
- use only allowed support categories
- do not discuss billing
- do not use TA role for broad operational messaging

Guardrails

- no direct billing access
- no settings access
- no integrations access
- no saved views or personal templates
- no staffing or cohort structure changes

Verified Behavior

Verified in the live browser pass:

- TA login succeeded

- dashboard, attendance, and messaging loaded
- checklist update succeeded through the live API
- handoff note creation succeeded through the live API
- direct access to `/billing` redirected back to `/dashboard`

Recommended First-Day Checklist

- review your dashboard
- open one assigned session in attendance
- update a checklist item in demo data
- leave a sample handoff note
- read existing family threads before sending anything new
